Shannon Plant South West have released a brand new video showing the Shannon solo - an amazing remote control dumper truck - in action. Watch the video here: <http://www.youtube.com/user/shannonplantsolo>

The UK's first ever production remote control, mini hi-tip dumper, called the Shannon Solo has been developed by two British Entrepreneurs - Stuart Selway and Ryan Symes. The Shannon Solo was invented to address the number of health and safety risks that are found in work places where plant hire equipment, like dumper trucks are used.

Stuart Selway, Director at Shannon Plant South West believes the Shannon Solo can reduce the risk to operators, because it can be controlled remotely up to distance of 100m. He says: "The Shannon Solo can be used in quarries or demolition sites where there is a threat of falling debris, near deep water where people would normally be at risk, or in other dangerous areas like airports, power stations and railway sites."

Other hazards that can be reduced are confined spaces, narrow access, busy highways, contaminated land like asbestos and unstable ground. The Shannon Solo will be launched and available from the Executive Hire Show 9 and 10 February 2011, Ricoh Arena, Coventry, on stand C35.
