The Shannon Solo WOW's the Crowds at 2011's Executive Hire Show

[The Shannon Solo WOW's the Crowds at 2011's Executive Hire Show - 17/02/2011](#)[Visit website >>](#)Release type: **Products**

The team from Shannon Plant have just returned from the 2011 Executive Hire Show in Coventry where they have been showcasing their new product, the Shannon Solo, where they received rave reviews. The Shannon Solo is a completely innovative, new remote controlled dumper truck set to take the construction world by storm. Developed by two British entrepreneurs - Stuart Selway and Ryan Symes, they invented and manufactured the Shannon Solo to address the many health and safety risks found in work places where plant hire equipment are used.

The Shannon Solo can be operated remotely from a distance of up to 100m, so therefore greatly reduces risks and hazards on site.

Stuart Selway, Director of Shannon Plant South West said: "We are very confident that there is a need for a product like the Shannon Solo in the plant industry. We had some very positive comments and feedback at the Executive Hire Show, where we launched the new remote control dumper truck. We had a number of companies that would like to buy the product and identified lots of different purposes for it."

Stuart adds: "We are looking forward to what is shaping up to be a very exciting future for Shannon Plant South West. The Shannon Solo's innovative and immediate benefit can allow plant hire companies to see a real return on their investment."
